Art Unit: 1756

1. The response of the applicant has been read and given careful consideration. Response to the arguments offered by the applicant are presented after the first rejection to which they are directed

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 12,13,15, and 16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The materials in claims 15, 16, 12 and 13 should refer to the high conductivity third layer, not the first layer (see prepub at [0044,0047,0075]).

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 11,12,14 and 16 are rejected under 35 U.S.C. 102(b) as being fully anticipated by Yusu et al. '915.

Yusu et al. '915 describes an optical recording medium substrate, coated with ZnS layer (1.8 refractive index, thermal conductivity is less than 0.5), an SiO₂ (1.45 refractive index, 1.38 thermal conductivity) layer, a Cu₂O (2.7 refractive index, 5.6 thermal conductivity) layer, a GeN (1.5-2.0 refractive index, thermal conductivity is 2), a GeTeSb recording layer, a second GeN layer, a ZnS-SiO₂ layer, a MgO layer and a reflective layer, (13/45-61). The equivalence of Cu₂O, Si-C, Al-N, DLC, Si-N, Ti-C, ZnO, Al-O, is disclosed. (7/1-32).

The rejection of claims 12 and 16 assume that the claims should refer to the properties being those of the third dielectric layer.

The cited example meets the recited limitations.

7. Claims 11-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yusu et al. '915.

It would have been obvious to one skilled in the art to modify example 4 by using Si-C, Al-N, DLC, Si-N, Ti-C, ZnO, Al-O, in place of the Cu₂O with a reasonable expectation of forming a useful optical recording medium based upon the disclosure of equivalence.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tabata '315 teaches the thermal conductivity of GeN [0098].

CRC handbook of Chemistry and Physics , 63rd Ed. (1982) pp. B-165, B-143 & B-99 teaches the refractive indices of ZnS, SiO₂ and Cu₂O.

JP 2002-294435 teaches the varying of the nitrogen content of GeN to cause the refractive index to vary over the range 1-5 to 2.0 [0003].

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Martin J. Angebrannt whose telephone number is 571-272-1378. The examiner can normally be reached on Monday-Thursday and alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff can be reached on 571-272-1385. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
